Week 3 — Assessment Rubric

Citizen-Facing Service Prototype: the Green Home Grant

The rubric is your client's definition of done. Your service is judged against these six rows, and you can check yourself against the Excellent column at any point during the two days.

Ship the six Minimum Viable Submission items first, then build outward from that floor towards Excellent.

Criterion	Good	Excellent
Functionality	Core flow works, main paths covered	All 5+ questions work, all eligibility paths handled, check-answers complete
Code quality	Reasonable structure, minor duplication	Small, focused components; clear state; no duplication
AI effectiveness	Log present with some detail	3+ log entries with clear before and after, critical review
Accessibility	Most inputs labelled, partial keyboard support	Passes keyboard test, all inputs labelled, error summary, 4.5:1 verified
GOV.UK visual	Recognisably GOV.UK, minor deviations	Correct type scale, spacing, start and confirmation patterns
Service Standard	Statement plus one other signal	Accessibility statement, phase banner, footer, cookie notice

HOW TO USE IT

Day 1: as a team, agree which row you most want to excel at (Activity 1 stretch).

Day 2 kickoff: self-assess against the Excellent column and name your gaps.

Day 2, peer feedback: for each of the two services you review, write one specific strength and one specific improvement for every row.

Tip: short on time? Do the keyboard and label checks first: they find the most problems and count most in the rubric.
